Sight Word Research

Abstract

What are sight words? Sight words are common words that a reader should recognize on sight. These are often referred to as “high frequency words” or “instant words.” Research indicates interventions used to teach sight words to students with disabilities, especially students with moderate to severe disabilities are beneficial. Multiple methods can be utilized to teach sight words to students with disabilities. These methods include: games, sight word recognition, and memorization. Research that catered specially to students with moderate to severe disabilities indicated that choosing between multiple methods is most effective way to teach sight words. This approach provides students with moderate to severe disabilities more generalization and independence.
