THE MODEL ONE-TEACHER SCHOOL

***

1. Should be in the country and made up of country pupils and country patrons.

2. Should have a plant and equipment within the reach of any live community, but certainly a good plant and attractive.

3. Should have a teacher, thoroughly competent and trained, but most of all a real rural teacher.

4. Should be near enough to the city to transport students for observation and practice without loss of time from other classes.

5. Initial cost:
   a. For improving plant, not over------------ $400.00
   b. For increasing salary, not over---------- 350.00
   c. For auto to carry students------------- 600.00
   d. For equipment------------------------ 100.00
   e. For incidentals------------------------ 50.00
   Total, not to exceed---------------------- $1500.00

The community must do just as much as they can be induced to do willingly. They must not be carried till they feel it is not their school.

A. C. Burton.
