BUNNISHED BREADRST

The students at the School of Agriculture are making progress in their experiments. They have been working on the project of developing new varieties of wheat and corn. The experimental plots are located on the outskirts of the campus, and the students are closely monitoring the growth and development of the crops.

DR. GOOLYSLYERS

The largest graduate of the Department of History is Miss Mary Johnston, who has completed all her requirements for a master's degree in American History. She will be presenting her thesis titled "The Political History of the United States" at the next graduation ceremony. Miss Johnston has impressed her professors with her knowledge and research skills, and is expected to do well in her future endeavors.
EDUCATION

What is this thing called a college? Where comes it to and how is it maintained? This question is of no small import, for it is related to the ability to reason clearly, concisely, and distinctly. Moreover, it is the key to the very heart of the educational process.

The general character of education is the ability to appreciate the industrial value of a college education. It is not a matter of degree but a matter of character. With the advent of the great depression, the cost of education has skyrocketed. It is time to re-examine the very character of education.

The national character of education is the ability to appreciate the industrial value of a college education. It is not a matter of degree but a matter of character. With the advent of the great depression, the cost of education has skyrocketed. It is time to re-examine the very character of education.

Yu had been more careful. In 1921, his college education cost a mere $100. But now, with the inflation, it costs more than double. There is a dire need for a re-evaluation of the very character of education.
